From Hydrospace to Aerospace

Engineered Solutions for
EMI Shielding & Thermal Management

Thermal Solutions – Protect Sensitive Electronics from Overheating

■ Rubbertherm™ Thermally Conductive Elastomers

High speed processors and high density electronic packages generate significant heat, which compromises optimum performance of computing devices and network systems. Rubbertherm removes and distributes heat build-up for reliable and efficient system operations.

Rubbertherms are composed of silicone polymers filled with high thermally conductive fillers. Rubbertherms are used as thermal pads with or without a carrier (reinforcing material). Low modulus Rubbertherms accommodate stringent requirements of thermal conductivity, electrical insulation and fill gaps between heat generating components and heat dissipating surfaces.

Rubbertherm pad over heat generating components

Board level shield (BLS) with and without Rubbersorb

Emission Absorption – Suppress and Eliminate Induced Noise

■ Rubbersorb™ Radar Absorbing Materials

Traditionally used to protect military equipment and sensitive devices on aircraft, this proven technology is now applied to land-based and hand-held equipment. As computing devices migrate to ever higher frequencies, the need for Rubbersorb will be ever increasing.

Rubbersorbs are based on silicone, fluorosilicone or nitrile polymers filled with iron carbonyl or corrosion resistant fillers to meet various environmental requirements. Rubbersorbs are offered in die-cuts, sheet stock and custom molded parts.

Molded Rubbersorbs

ISO9001:2000

Emissions Control and Shielding Solutions

- **Radio Frequency Interference RFI**
- **Electromagnetic Interference EMI**
- **Electromagnetic Pulse EMP**
- **Electrostatic Discharge ESD**

Rubbershield™ Conductive Elastomers

EMI shielding and sealing devices provide electrical continuity between mating surfaces while ensuring environmental protection and vibration isolation.

■ **Electrically Conductive**

Excellent shielding performance while maintaining electrical integrity

■ **Mechanically Durable**

Excellent physical properties to ensure long life in critical applications

■ **Resilient and Conformable**

Excellent vibration isolation, conforms to mating components and maintains conductive properties

Rubbershield gaskets provide EMI shielding, EMP protection, environmental sealing and vibration isolation in a wide range of temperatures and pressures.

■ **Rubbershield™ Applications**

The use of conductive elastomers continues to spread rapidly with the advancements in digital technology and worldwide reliance on high density packaging. Some of the industries with significant demand include:

- **Aerospace**
- **Military electronics**
- **Telecommunications**
- **Electronic equipment**
- **Medical electronics**
- **Petroleum exploration and production**
- **Automotive**

■ **Rubbershield™ - How it Works**

Rubbershield elastomers are made by infusing conductive particulates in premium grade polymers. Silicones have historically been used as base polymers for conductive elastomers to provide reliable services at temperature extremes, good resistance to compression set and long term exposure to ozone. Fluorosilicone combines the attributes of silicone with additional resistance to hydrocarbons, and hydraulic fluids. Fluorocarbon-based elastomers are also used in petroleum exploration/production as well as automotive applications. The threat of nuclear, biological and chemical (NBC) warfare has created the demand for EPDM-based conductive elastomers.

■ **Rubbershield™ Capabilities/Solutions**

- **Custom molded components**
- **O-Rings and intricate shapes**
- **Sheet stock and die-cuts**
- **Fabricated seals and gaskets**
- **Extruded profiles**
- **Vulcanized to metals and composites**
- **Airframe and structural seals**
- **Reinforced and high performance seals**

Rubbercraft Quality Products...

Aerodynamic Seals

- Rubber to Metal, Plastic
- Vulcanized to Teflon
- Fabric Reinforced (Fiber glass, polyester, Nomex/ceramics)

Composite Bonding

- Composite tooling
- Inflatable bladders
- Isogrid structures
- Intensifiers
- Mandrels

Aircraft Interiors

- Window and door seals
- Armrest and tray tables
- Cockpit and canopy seals
- Decorative color matching
- Light and video fixture seals
- Cargo door and overhead bin seals

Launch Vehicle Components

- Raceway covers
- Fairings
- Thermal barriers
- Light weight materials
- Ablative materials

Precision Sealing Solutions from Hydrospace to Aerospace

If your application calls for molded or extruded rubber parts, Rubbercraft has the solution. Our experienced technical staff can help you identify the best techniques and the right materials with hundreds of die patterns, extrusions, molds, as well as custom solutions. Request our free catalog or visit us on the web at www.rubbercraft.com.

Molded & Extruded Elastomers

- Full range of elastomers for aerospace, medical, automotive and electronics
- Design freedom
 - Mold-in-place
 - Extruded continuous lengths
 - Die cut from sheet
- Wide range of magnetic and nonmagnetic fillers
- Rubber-to-metal /plastic bonding
- Teflon skin and fabric reinforced seals
- Color matching FED-STD-595
- EMI/RFI/ESD shielding to MIL-DTL-G-83528C
- Shielding effectiveness ~ 80-115 dB
- Complete tooling services
- Complete laboratory services
- GPL-approved compounds
- Custom formulations

• Silicone	• SBR	• Viton
• Fluorosilicone	• Natural rubber	• Fluorel
• Neoprene	• Urethane	• And More...
• EPDM	• Nitrile
