

October 2020

Dear Valued Customer:

Integrated Polymer Solutions (IPS) is excited to announce its recent acquisition of MAST Technologies, a leading manufacturer of radar absorbing materials and RF absorbing materials for the defense and electronics industries. Located in San Diego, CA, USA, MAST Technologies will be the fourth AS9100-certified facility for IPS.

The acquisition of MAST compliments the existing wide breadth of engineered elastomeric sealing solutions IPS has been providing our customers for decades.

MAST Technologies designs, develops and manufactures innovative radar absorbing materials, microwave and EMI absorbing materials. Engineered elastomeric, caulking and coating materials are formulated to provide tailored electrical performance without compromising customer-driven mechanical and environmental requirements. In-house design and development foster intimate communication between MAST Technologies and the customer that persists from product inception to post-delivery activities. MAST Technologies prides itself on the ability to provide premium technology at competitive prices, with best in class lead-times.

The technologies, product range, and marketplace position that MAST Technologies brings to this partnership are very complimentary to IPS' current capabilities. We look forward to this new phase of business expansion while continuing to serve our customers with strong technical solutions, excellent delivery, and quality products.

We look forward to helping you with any of your elastomeric needs going forward.

Sincerely,

Leigh Munsell  
VP Business Development  
Integrate Polymer Solutions
